Week 3-1:

Roll no:240801141

Name : Jyothshna rajaram

Status	Finished
Started	Monday, 23 December 2024, 5:33 PM
Completed	Thursday, 24 October 2024, 9:47 AM
Duration	60 days 7 hours

Q1) Write a program to read two integer values and print true if both the numbers end with

the same digit, otherwise print false.

Example: If 698 and 768 are given, program should print true as they both end with 8.

Sample Input 1

25 53

Sample Output 1

false

Sample Input 2

27 77

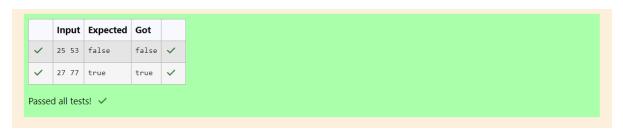

Sample Output 2

true

Code:

```
#include<stdio.h>
 2 🔻
    int main(){
        int num1, num2;
 3
        scanf("%d%d",&num1,&num2);
 4
        int lastDigit1=num1%10;
 5
        int lastDigit2=num2%10;
 6
        if(lastDigit1==lastDigit2){
 7 ▼
             printf("true\n");
 8
 9
        }
10 +
        else{
             printf("false\n");
11
12
13
        return 0;
14
    }
```

OUTPUT:

Q2) In this challenge, we're getting started with conditional statements.

Task

Given an integer, n, perform the following conditional actions:

- If n is odd, print Weird
- If n is even and in the inclusive range of 2 to 5, print Not Weird
- If n is even and in the inclusive range of 6 to 20, print Weird
- If n is even and greater than 20, print Not Weird

Complete the stub code provided in your editor to print whether or not n is weird.

Input Format

A single line containing a positive integer, n.

Constraints

• 1 < n < 100

Output Format

Print Weird if the number is weird; otherwise, print Not Weird.

Sample Input 0

3

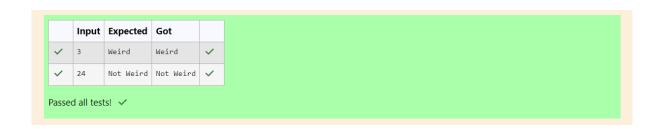

Sample Output 0

Weird

Code:

#include<stdio.h> 1 2 🔻 int main(){ 3 int n; scanf("%d",&n); 4 5 🔻 if(n%2!=0){ printf("Weird\n"); 6 7 8 * else{ if(n>=2&&n<=5){ 9 + 10 printf("Not Weird\n"); }else if (n>=6&&n<=20){</pre> 11 * printf("Weird\n"); 12 }else if(n>20){ 13 * 14 printf("Not Weird\n"); 15 } 16 17 return 0; 18 }

OUTPUT:

Q3) Three numbers form a Pythagorean triple if the sum of squares of two numbers is equal to the square of the third. For example, 3, 5 and 4 form a Pythagorean triple, since 3*3 + 4*4 = 25 = 5*5You are given three integers, a, b, and c. They need not be given in increasing order. If they form a Pythagorean triple, then print "yes", otherwise, print "no". Please note that the output message is in small letters. Sample Input 1 3 5 4 Sample Output 1 Yes Code:

```
1 #include<stdio.h>
2 v int main(){
3
       int a,b,c;
       scanf("%d%d%d",&a,&b,&c);
4
5
      if((a*a + b*b == c*c)||
      (a*a + c*c == b*b)||
6
7
      (c*c + b*b == a*a))
     {printf("yes\n");}
8
9
      else {printf("no\n");
10
      }
11 }
```

OUTPUT:
